

The Planet Earth

- A. Welcome to our planet. It's a magical place to live. Our Earth is surrounded by the gases - nitrogen (78.09%), oxygen (20.95%), etc. They protect life on the Earth.
- B. Geologists think that there was once a single supercontinent.
- C. But today the lithosphere is broken up into 7 large pieces and many smaller ones, which are constantly moving.
- D. The Earth crust is made of rock, which is made of chemical substances.
- E. Water, wind, and other natural forces cause rocks and earth to wear away. These forces also move bits of rock and earth to new places. This movement changes the shape of the land.
- F. More than two-thirds of the Earth's surface is covered with salt water with a huge variety of plant and animal life in it.
- G. The amount of water on the Earth doesn't change, but water changes its state. It exists as a liquid, it freezes into a solid as snow and hail, and it also exists as an invisible gas in the air.
